

Who We Are

Resolute Elevator is leading the way in innovation. We offer products that are solutions for design professionals, building owners, and contractors.

Elevator Experts

With our experience you receive honest assessments you can trust.

Manufacturer

We deliver the highest quality standards in the industry.

Solution Provider

The Resolute Elevator System is for any mid or low rise project.

ELEVATOR

A revolutionary elevator solution that simplifies projects, reduces risk, and ensures consistent quality.

The Resolute Elevator System is...

- An Engineered Structural Hoistway - Project specific design. Able to carry all vertical loads. Fabricated to AISC and AWS standards. Available with UL-listed, ICC/NTA-inspected fire rating.
- Available in Both MRL Traction and MRL Hydraulic Designs optimized for low and mid-rise applications. Smooth, quiet operation and reduced energy usage.
- Factory Installed Elevator - Includes the cab, rails, controller, entrances, and wiring. QC-tested under controlled conditions for precision alignment and performance verification prior to shipment.
- Integrated Electrical - Complete with service lighting, receptacles, and disconnecting means for single-point power connection on site.

The result is a turnkey elevator system that arrives fully assembled, pre-tested, and ready to set - reducing on-site work, improving quality, and ensuring consistent, code-verified performance.

What Is a Modular Elevator System?

The Resolute Modular Elevator System is a factory-built, code-compliant elevator delivered as a complete unit — a fully engineered steel hoistway with all elevator components pre-installed, wired, and tested before shipment.

Steps From Design To Operation

1. Design Integration – Early coordination with architects and engineers ensures the modular hoistway fits seamlessly into the building layout, reducing field conflicts and design revisions.
2. Factory Assembly – Structural tower and elevator equipment are built, wired, and tested under controlled conditions for consistent quality and code compliance.
3. Delivery & Setting – The complete unit arrives ready to install and is crane-set in place, typically within a single day, minimizing site disruption.
4. Commissioning & Inspection – Final power connections and safety checks are completed on site; systems pass inspection quickly due to pre-verified factory testing.
5. Ownership & Service – Once operational, the system provides reliable performance using standard, serviceable components supported by Resolute's maintenance agreement.

Resolute Benefits

1. Controlled Costs: Fixed pricing leads to predictable budgeting.
2. Lower Cost of Ownership: Savings with non-proprietary components.
3. Integrated Approach: Fewer trade coordination complexities. Fewer call backs.
4. Streamlined Communication: One contact for the elevator, hoistway, and engineering.
5. Simplified Scheduling: Predictable timelines for installations. We deliver when you need the unit and start up in less than a week.
6. Streamlined Submittal Process: Incorporating the Modular Elevator System into project designs is further simplified by the availability of pre-designed layouts and 3D Revit models.
